**CV:** Co-efficient of Variation of Fibre Diameter is also a measure of the variation of the thickness of fibres tested, but is expressed as a percentage of the fibre diameter.

**CF:** Comfort Factor is the percentage of fibres finer than 30 microns in a sample.

**BWT:** Body weight in kilograms.

**EMD:** Eye Muscle Depth measured in millimeters.

**FAT:** Fat depth measured in millimeters.

**Side Sample Testing:** For paddock rams, measurements have been sourced from Riverina Wool Testers, Wagga Wagga, and samples were taken July/August 2019. For shedded rams, measurements have been sourced from the AWTA, Melbourne, and samples were taken June 2019.

## AUSTRALIAN SHEEP BREEDING VALUES (ASBVs)

MERINOSELECT is delivered by Sheep Genetics and information is calculated from an analysis of pedigree and performance information contained in the MERINOSELECT database. An Australian Sheep Breeding Value is an estimate of the genetic potential a sheep will pass on to its progeny. Sheep are ranked for various production characteristics using Australian Sheep Breeding Values (ASBVs). **ASBVs are designed to be used in conjunction with visual selection methods to select sheep that match your breeding objectives.**

**Yearling Fibre Diameter (YFD):** Fibre diameter ASBVs are quoted in microns and are expressed as the deviation from the average of animals in the database in the 1990 drop. The more negative the number the finer the animal. An ASBV of -1.6 means the animal will produce wool that is 1.6 micron finer than the average in 1990. A ram with an ASBV for FD of -1.6 will pass half of this benefit onto his lambs, that is -0.8.

**Yearling Clean Fleece Weight (YCFW):** A positive Fleece Weight ASBV means a genetically heavier cutting animal. Fleece weight ASBVs are quoted in percentages. ASBVs are deviations from the average of the animals in the database in the 1990 drop. An ASBV of +20% means the animal will cut 20% more wool than the average in 1990. A ram with an ASBV of +20% will pass half of this benefit onto his lambs, that is +10%.

**Post Weaning Weight (PWT):** Weights are measured in kilograms and ASBVs are quoted in kilograms. ASBVs are deviations from the average of animals in the database in the 1990 drop. So an animal with a PWT ASBV of +6kg will be genetically 6kg heavier at post weaning weight than the average in 1990. A ram with a PWT ASBV of +6kg will pass half of this benefit onto his lambs, that is +3kg.

**Yearling Weight (YWT):** Weights are measured in kilograms and ASBVs are quoted in kilograms. ASBVs are deviations from the average of animals in the database in the 1990 drop. So an animal with a YWT ASBV of +6kg will be genetically 6kg heavier at yearling age than the average in 1990. A ram with a YWT ASBV of +6kg will pass half of this benefit onto his lambs, that is +3kg.

**Yearling Eye Muscle Depth (YEMD):** Muscling ASBVs are measured and quoted in millimetres. They are deviations from the average of animals in the database in the 1990 drop. So an animal with an EMD of +1.2 will genetically have an eye muscle 1.2 mm deeper than the average in the 1990 drop. A ram with an ASBV of +1.2 mm for EMD will pass half of this benefit onto his lamb, that is +0.6 mm.

**Yearling Fat (YFAT):** Fatness ASBVs are measured and quoted in millimetres. They are deviations from the average of animals in the database in the 1990 drop. An animal with a FAT of +0.6 will genetically have 0.6 mm more subcutaneous fat than the average in 1990. A ram with an ASBV of +0.6 for FAT will pass half of this benefit onto his lambs, that is +0.3 mm.

### Indexes

An index ranks animals for their suitability to a particular production or breeding objective. Individual ASBVs are weighted according to their relative economic importance and are combined to produce a single figure to rank each animal. Selection of animals for a number of purposes is made easier through the use of MERINOSELECT selection indexes.

The **Merino Production + (MP+)** index ranks animals on their ability to produce progeny for a fine wool operation that has significant surplus sheep sales. The index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales.

The **Dual Purpose + (DP+)** index ranks animals on their ability to produce Merinos for a dual purpose operation. It is for self replacing Merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.

**Wanganelia & Poll Boonoke 2018 drop sale ram ASBV data has been extracted from the MERINOSELECT analysis dated 21 August 2019.**
